

At a glance: This rehab stroller is good for us

This checklist will help you in deciding which rehab stroller comes into question for you. Your child's therapist and your specialist dealer can provide advice for your decision.

Sample application:

This is important for my child and myself in day-to-day life.

My child needs a fully supine position. Just a slightly reclining position is not sufficient, since he/she should also lie on the side. ...>

I need a stroller in which I can quickly change the viewing direction. My child often has spastic episodes and I want to be able to look at him/her. ...>

My child sometimes has to sit in the stroller for a long time. If he/she gets tired while we are on the go, he/she should be able to get some rest. ...>

Because my child has to have a 180° reclining position and sometimes lies on his/her side, I want to be sure that the stroller does not tip backwards. ...>

When we are away from home, my child should sit stably and upright. But I want him/her to still be able to sit comfortably and have times for relaxation. ...>

My child reacts very sensitively to vibrations. A good suspension and soft upholstery are therefore important to us. ...>

My child's legs should not dangle in the air when he/she is seated in the stroller. We need a footrest that can be adjusted to the leg length. ...>

Our stroller should have versatile uses because we do not want to have restrictions imposed on us. It should be easy to push it using swivel wheels in the city and with locked wheels on somewhat bumpier roads, for example. ...>

My child needs a lot of support when sitting; it must be possible to individually adjust everything in the stroller. ...>

We are on the road a lot and our stroller always has to come with us. I already have back problems and do not want to be burdened with a heavy stroller. ...>

My child needs to receive medical treatment even when we are on the move. For example, we have to bring along an oxygen tank or an aspirator. The stroller should therefore have a good way to carry these things. ...>

Since my child sits so well in the stroller, we want to use the seat unit as a replacement for the therapy chair in the kindergarten. We need a suitable chassis for this. ...>

We already have a rehab stroller and need a practical second rehab stroller that we can quickly take with us for short distances. ...>

We are outside a lot, and we like to go on long walks sometimes. The stroller must be able to do this. ...>

Our bus service offers special restraining devices for wheelchairs and strollers in their minibus. The stroller should be able to take advantage of these. ...>

I want to be certain that the rehab stroller is truly safe to use for both my child and me. ...>
